BUILDING

The Polionda sheets of Ondaplast allow a wide range of applications and solutions even in the world of construction, building in general and shipyards.

SHEETS FOR THE PROTECTION OF FLOORS AND WALLS

The Polionda sheet is particularly suited to be used for the protection of floors and walls from bumps and scratches inside construction sites, wheter they are building or naval.

With this product, developed specifically for this application, you can protect floors, stairs, walls, etc.

Solutions with rectangular plates or puzzles can adapt to your needs.

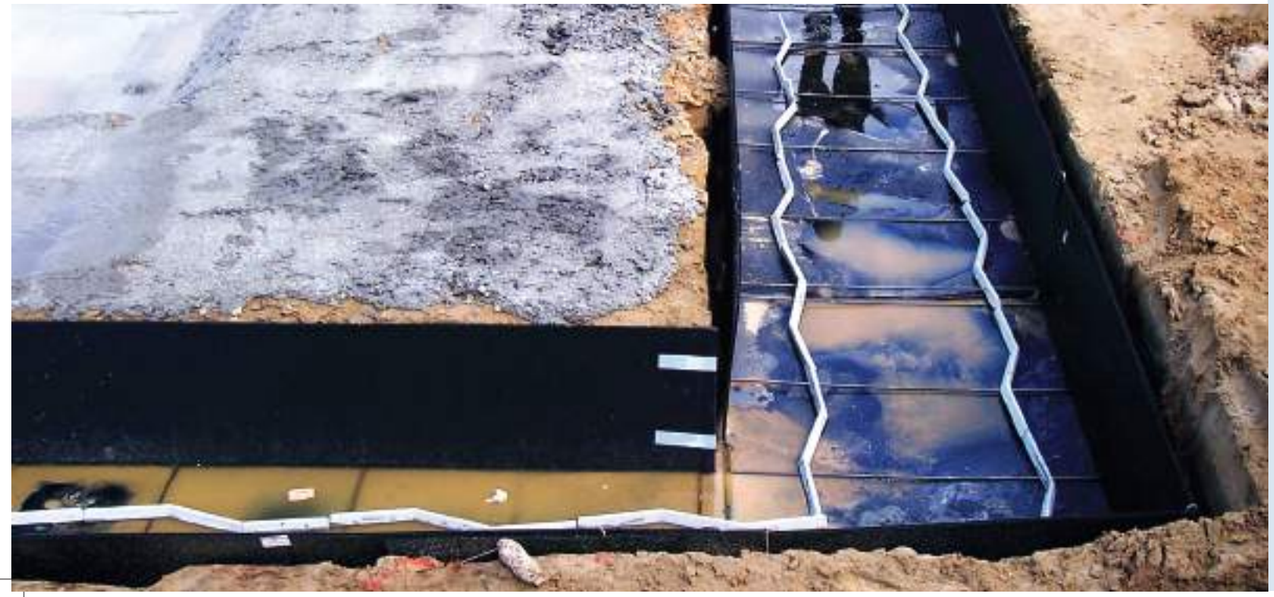
Ondaplast sheets are also available in flame retardant version, with LPCB certification

BEAMFORM BORDER SHEETS

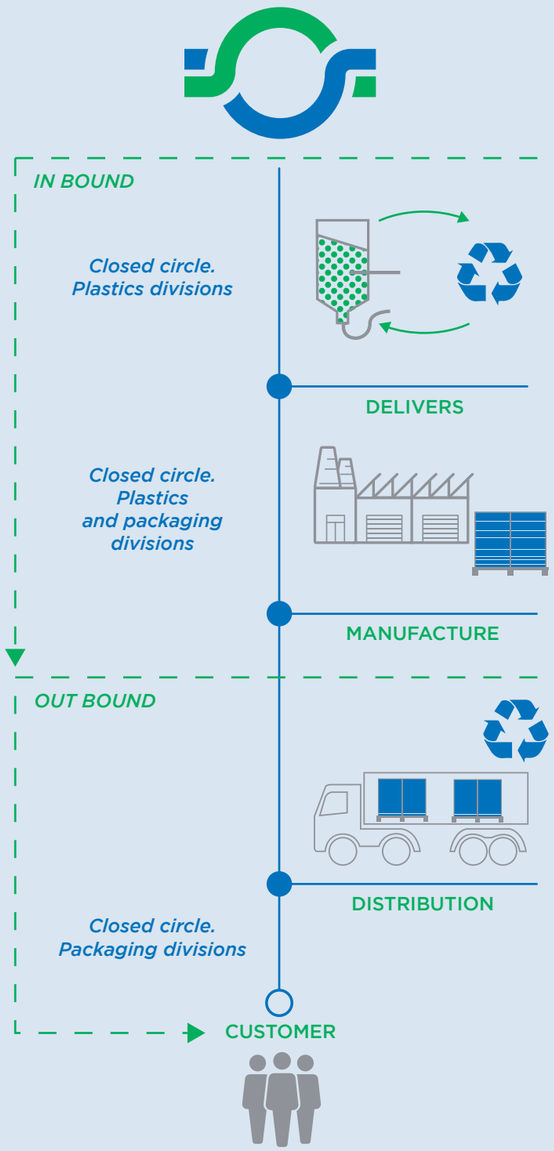
Modern construction techniques require the use of PP plates for making the foundations of buildings.

The advantages are various:

- The sheet remain in place, therefore maintenance and transport after use are not required, (as it happens with wooden formworks)
- The sheet, remaining in place, protect the foundations from humidity and act as thermal insulator
- Robust, economical, versatile, easy to apply and fast



Customers supply chain:



PERIMETER SHEETS FOR CONSTRUCTION SITES

Ondaplast also produces sheets used to protect the external perimeters of construction sites.

These sheets, in addition to the usual characteristics of robustness, lightness and ease of installation, are also customizable to allow the use of surfaces as advertising spaces.

Ondaplast is able to print perimeter sheets in a high quality and in a flexible way according to the needs of its customers.

SHEETS FOR LAYING UNDERFLOOR HEATING

It is a special application developed by Ondaplast that allows to optimize and make efficient the laying of pipes for floor heating.

On the plates are printed the references for the laying of the tubes, and these plates are supplied folded and packaged for making their handling easy and fast.
