

PHARMACEUTICAL PACKAGING

High Quality Packaging in Polypropylene

PHARMA AND COSMETICS

AUTOMOTIVE, ELECTRONICS, IRON & STEEL, CUSTOM PROJECTS

The production of drugs and cosmetics, especially of the injectable type, is extremely delicate and requires the highest standards of hygiene. Indeed, the accidental injection of a single particle of dust into the human body can cause very unpredictable and regrettable consequences.

The plastic packaging can contribute to lower significantly these risks thanks to its molecular cohesion and its structural stability, in fact the replacement of paper and cardboard with polypropylene packaging is continuous.

The secondary packaging in Polionda® and Ondaplaque, or corrugated and solid PP, offers significant advantages in the handling and storage of vials, ampoules, cartridges and syringes:

- Impermeability to water, humidity and greasy substances
- Immunity against fungi and molds
- Absence of bacterial proliferation
- Chemical and biological inertness
- Possibility of sterilization, also with gamma rays
- Total recyclability – Note that Ondaplast is always willing to collect used PP packaging for direct recycling.

WHO WE ARE

Ondaplast is one of the main European producers of pharma and cosmetics PP packaging, offering a number of unique benefits:

The total vertical integration of the production process, from the extrusion of the PP, to the transformation of the sheets, to the packaging of the finished products: this guarantees the continuous control of the material quality and pureness throughout all the manufacturing stages.

The use of two pressurized pharmaceutical rooms, one per plant, hosting the assembly and packaging operations. They operate according to

strict hygiene protocols to guarantee the total absence of contamination.

The two Ondaplast manufacturing plants, in Italy and Serbia, provide better proximity to the Western and to the Eastern European customers. At the same time, they perform the function of reciprocal assurance: the dual production facilities guarantee all customers to be served under all circumstances, and let them avoid to engage with too many suppliers for back-up.

The Ondaplast production standards are guaranteed by the ISO 15593 certification.

PROTECTION FROM CONTAMINATION

All the operators of the pharmaceutical rooms in addition to the mandatory safety equipment wear clean smocks and overalls, and single-use gloves, baggy caps and masks.

LABORATORY TESTING

Random production samples are tested in the Ondaplast laboratories to guarantee the compliance of the product parameters with the specifications, and to double check the system of Worker Self-Control.

HYGIENIC CHECKS

Chemical and microbiological tests are performed on finished products according to UNI EN 15593 to guarantee quality and safety.

Traceability and Product Identification

A single label identifies each pallet from extrusion to shipment to guarantee that all information of the specific production batch are preserved.
