

GLASS

Advanced solutions in extruded polypropylene

LAYER PADS FOR GLASS CONTAINERS AND CANS

Our layer pads in Polionda® are designed to have a long life and it is possible to find separators of this type with 8 - 10 years of age in use. Ondaplast layer pads exist in two versions: solid and corrugated.

The corrugated layer pads based on the Polionda® sheets have a welded perimeter to allow washing, hence to guarantee the maximum hygiene.

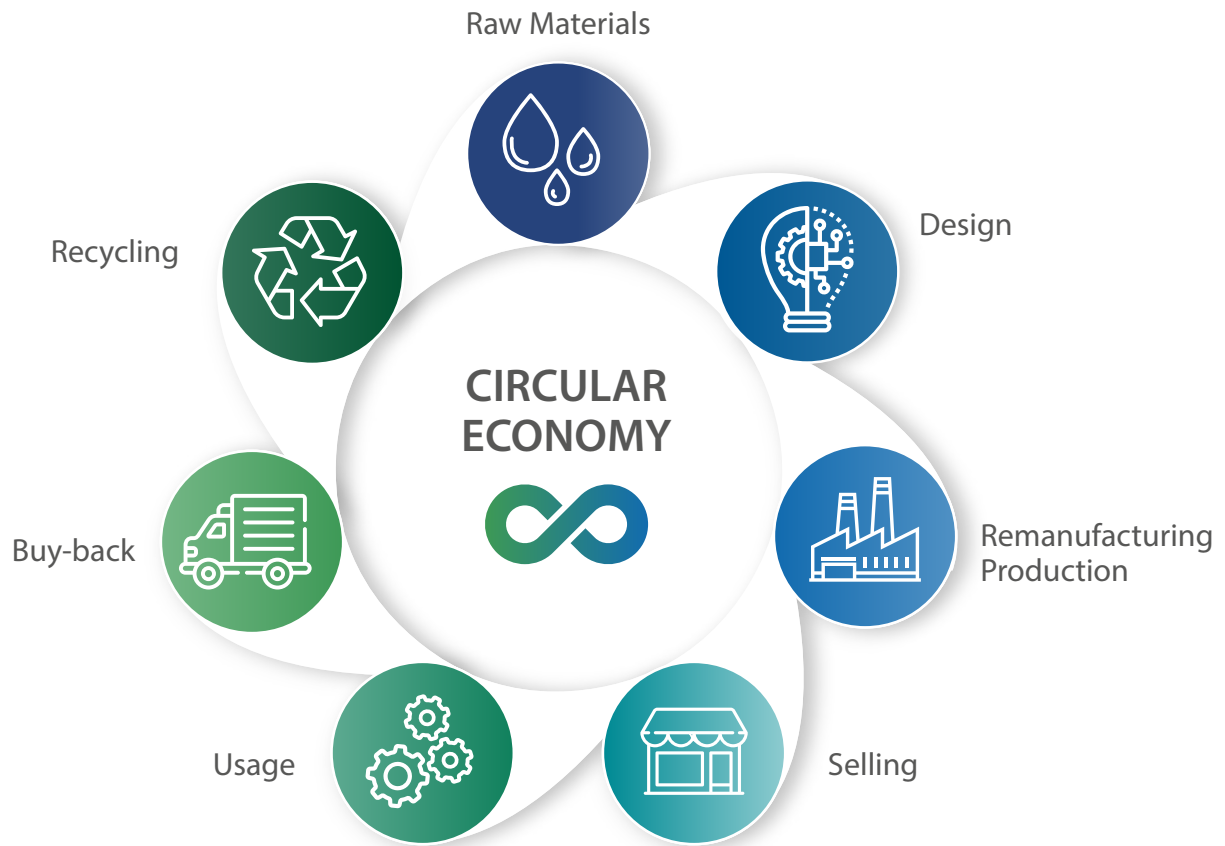

The solid layer pads instead, based on the Ondaplaque sheets, have a rounded perimeter (exclusive Ondaplast technique) to prevent damage to the stretch film wrapping the pallet.

The Ondaplast range of layer pads includes different weights, colors and sizes, to encode the layer pad sheets either with laser (patented) or ink or thermal transfer printing.

Different containers in size, material or weight require pads with specific characteristics: our technical staff will be able to suggest the best solution for every palletizing requirement.

Ondaplast is the supplier of all the leading container glass manufacturers, and these collaborations are key for innovation and for the continuous improvement of customer satisfaction.

Ondaplast is an active player within the circular economy system, where the packaging, once used, is recovered directly by Ondaplast itself or through a network of specialized partners to recycle and reuse the raw material.

Furthermore the entire production process, the product life-cycle and its recycling combine the highest quality levels with sustainability: in fact the

continuous reuse of the raw material favours the reduction of waste and a better energy efficiency.

Finally, plastics aren't all the same. Ondaplast uses only polypropylene, that is fully recyclable and certified for food contact and in line with all the most stringent regulations (phtalate-free, MOHS, MOAS, RoHS, Reach)
